

ZODIAC

OPEN SEA T1A ISO 9650 LIFERAFT

By choosing a Zodiac liferaft you will be opting for the experience and technical excellence of the world's leader in inflatables and marine

lifesaving equipment. Zodiac supplies SOLAS liferafts to the largest shipyards for commercial vessels, cruise ships and military craft.

Emergency equipment	U.S.L.(1)	Y.A.(2)
Rescue quoit & line	1	1
Safety Knife	1	1
Drogue & line	1	1
Paddles	2	2
Sponges	1 / person	1 / person
Bailer	1	1
Repair kit	1	1
Survival instructions	1	1
Signalling card	1	1
Torch /spare batteries / bulb	1	1
Bellows	1	1
Leak stoppers	-	6
Lighting system lithium	2	1
Plastic bags	1 / person	5/person
Fishing kit	1	1
Distress equipment		
Red hand flares	2	4
Orange smoke flare	1	2
Para distress rocket	-	2
Matches	1	-
Chemical lights	6	-
Whistle	1	1
Medical equipment		
First aid kit	1	1
Seasickness tablets	6 / person	6 / person
Sunburn cream	-	1
Survival rations		
Water 500ml	2 / person	1 / person
Rations	1 /person	1 / person
Drinking vessel	1	1

MODEL	COMPARTMENTS	CANISTER		VALISE	
		DIMENSIONS	WEIGHT	DIMENSIONS	WEIGHT
4 PERSON	3	820 x 550 x 260	38kg	670 x 400 x 210	36kg
6 PERSON	3	820 x 550 x 315	46kg	720 x 480 x 240	41kg
8 PERSON	3	820 x 550 x 315	53kg	-	-
10 PERSON	3	920 x 550 x 315	65kg	-	-

(1) Uniform Shipping Laws Standard. Equipment pack required for survey vessels
 (2) Yachting Australia.

The Zodiac life raft advantages

Nylon / Polyurethane triplex fabric

All Zodiac liferafts are now equipped with this brand of fabric. With its triple layer in nylon and polyurethane, this triplex fabric insures great air-tightness and durability, light weight and perfect visibility.

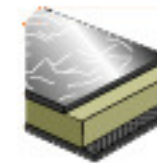

Vacuum packed protection

More than 15 years ago Zodiac came up with the idea of vacuum packing the liferaft in a partially evacuated plastic pocket. This keeps the life raft at a constant level of humidity and protects it from damaging changes of the environment and the corrosive, salty atmosphere. A long life expectancy and increased protection of the vital safety equipment packed in the life raft are direct benefits of this system.

Stabilizing water pockets

High volume, weighted water ballast pockets for immediate deployment give stability when boarding and stabilize the life raft in high winds and heavy seas.

Cellular foam floor with aluminium coating

A particularly innovative sandwich design incorporates a cellular foam middle between a fabric base and aluminium film top layer. The layer of aluminium film reflects back natural body heat providing protection and insulation from the cold of the water. This system offers superior insulation, lighter weight and needs no inflation system to work compared to an old-fashioned inflatable floor.

An optimum boarding system

An internal ladder coupled with a boarding ramp allows you to slide easily on board from the water.

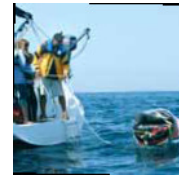

Firing head

The vital part of the inflation process. Zodiac uses the same exclusive firing head on all its life rafts from 4 person leisure models to 150 person commercial models. Using a tensioned firing pin (similar to that of a fire-arm) inflation is immediate and risk free: No moving parts to block the system or impede inflation. Unlike the crude methods used in some life rafts, this system does not rely on the physical strength of the user to set it off, the pressure of releasing the trigger spring is enough to start the inflation.

Airtight compartments

On setting off the gas inflation system, the whole inflatable structure (buoyancy tubes and canopy arch) is immediately inflated. The two buoyancy tubes are totally independent of each other, ensuring that the life raft stays afloat even if one of the tubes is punctured.

To inflate a Zodiac life raft pull the full length of the painter line and then give a firm tug to fire the CO2 cylinder. The pressure from the inflating life raft automatically opens the canister allowing the gas to inflate the 2 buoyancy tubes and arch(3). About twenty seconds is all it takes for the life raft to take shape and be ready for use
